
RETRO PETRIFIED WOOD

Antolini Precioustone

Formed by nature millions of years ago, the Etruscans kept this in their ancient temples as a magical and propitiatory object of worship.

Petrified wood - from the Greek *petro* meaning rock - is siliconized wood that, depending on the elements in the soil, in time turns into quartz or opal. The compositions, inspired by the 1970s, are suitable for any interior décor.

The best-known deposits are in Brazil Argentina, Canada, India and Australia. Slabs and cut-to-size pieces, available in limited quantities, contain specimens selected by hand.

This mineral has a high silicon content, activates the metabolism and facilitates skin regeneration.

To combat headaches and control emotions.
