
SHELLFLINT JASPER

Antolini Precioustone

Multifarious and kaleidoscopic, medicine men valued jasper as a powerful, sacred stone. It inspires people with courage and sharpens instinctive intuition and inner control.

Jasper - from the Greek *iaspis* - is a micro-crystalline variety of quartz available in numerous colourations brought about by the different substances that contribute to its formation. The special texture of this mineral brings to mind the typical iridescence of shells and lights up areas with shades of the seashore.

The largest deposits are in Brazil, Australia, India and Madagascar. Suitable for application for interiors. Slabs and cut-to-size pieces are put together by hand in order to enhance the natural beauty of the stone.

To give stability and transmit new energy.
